

Problem Statement (Slide-Ready)

Traditional lending in developing countries faces major limitations:

- Most banks do not offer small loans, leaving many people without quick financial access.
- Slow and manual loan approvals
- Limited access to formal banking services, especially in rural areas
- Strict eligibility requirements excluding many borrowers
- Poor tracking of borrower credit history
- Low transparency between borrowers and lenders
- Lenders lack a secure, data-driven way to invest and monitor returns
- High risk of disputes, fraud, and delayed repayments due to lack of centralized monitoring

As a result, individuals and small businesses struggle to access funding, and lenders lack confidence and security in investing their capital.

FundBridge

“Fund” → Clearly communicates that the platform deals with financing, loans, and investments.

“Bridge” → Symbolizes connecting borrowers and lenders, bridging financial gaps.

Solution:

A digital Peer-to-Peer (P2P) lending platform solves these issues by directly connecting borrowers and lenders.

Features:

User Registration & KYC Verification

- Users can register as Borrower or Lender
- Identity verification using NID/Passport
- Phone/Email validation
- Upload required documents for KYC approval

Borrower Loan Request Posting

Borrowers can:

- Submit a new loan request
- Enter required amount, loan duration, and loan purpose
- Upload financial proof (salary slip, bank statement, etc.)
- Track the status of submitted loan applications

Loan Marketplace

Lenders can:

- View all active loan requests
- Filter by loan amount, interest rate, duration, risk category, etc.
- Check borrower profiles and past repayment history

Lender Offers & Funding

Lenders can:

- Send loan offers to borrowers
- Set interest rate, repayment duration, and repayment conditions
- Fully or partially fund a loan

Multi-Lender Funding (Crowd-Funding Model)

- A single loan can be funded by multiple lenders
- Each lender contributes a portion of the loan amount
- EMI repayment is distributed proportionally to each lender based on contribution
- Reduces risk for lenders and increases funding success rate

Digital Loan Agreement

Once a borrower accepts an offer:

- System automatically generates a digital loan contract
- Both borrower and lender approve electronically
- Agreement securely stored in the system database

Secure Payments via Payment Gateway

- Loan amount is transferred securely to borrower's in-platform wallet or escrow
- Withdrawals and deposits tracked in transaction history
- Ensures transparent and secure fund movement

EMI-Based Repayment System

Borrower:

- Repays via monthly/weekly EMI
- Receives reminders before each due date

Lender:

- Automatically receives principal + interest in their account
- Can track repayment and earnings through dashboard

Automatic Payment Deduction & Penalties

- EMI is auto-deducted from borrower's balance or linked payment account
- If balance is insufficient:
 - System applies late fee or penalty
 - Notifications are sent
 - Penalty and outstanding balance updated
 - Borrower's credit score decreases

Credit Scoring & Risk Analysis

System calculates borrower creditworthiness using:

- Past repayment behavior
 - Number of loans taken
 - Loan completion rate
 - Missed EMI and penalties
 - Default records
- This score helps lenders evaluate loan risk.

Admin Management Panel

Admin can:

- Approve/reject KYC documents
- Monitor loans, repayments, wallets, and funding activities
- Review user logs and suspicious activity
- Block fraudulent accounts
- Generate system and financial analysis reports

Automatic Notifications & Alerts

System automatically sends updates such as:

- EMI due notifications
- Successful auto-deduction messages
- Payment failure alerts
- Penalty warnings
- Loan offer acceptance alerts

Delivered through:

- In-app notifications
- Email/SMS (optional)
